SUMMARY

Data Analyst and M.S. Data Science graduate from UC San Diego with 2+ years of experience in data analytics, software engineering, and financial services. Experienced in SQL, Snowflake, Python, Tableau, Power BI, data pipelines, forecasting, and business reporting, with a track record of automating analytics workflows and delivering actionable insights for Finance and executive stakeholders.

EDUCATION

University of California, San Diego, CA

M.S. Data Science | GPA: 3.89/4.0 | Graduated: June 2026

SKILLS

- **Analytics:** SQL, Data Analysis, Statistical Analysis, Forecasting, Business Analytics
 - **Data Engineering:** Snowflake, PostgreSQL, ETL, Data Pipelines, SQL Optimization
 - **BI & Reporting:** Tableau, Power BI, Excel, PivotTables
 - **Programming:** Python, SQL, Java, R
 - **Data Quality:** Data Validation, Data Cleaning, Data Transformation
 - **DevOps:** Jenkins, Git, Docker, Kubernetes
-

WORK EXPERIENCE

MADE BY GATHER, NEW YORK, NY (REMOTE)

Aug 25 – June 26

Data Analyst Intern

- Developed retailer-level sales forecasting models using **Holt-Winters, ARIMA, Random Forest, and XGBoost** in Python, improving forecast **accuracy from 47% to 71%** and reducing MAPE by 30%.
 - Automated the end-to-end weekly forecasting pipeline using Jenkins, reducing manual reporting effort from 4 hours to 1 hour.
 - Designed **Snowflake-based** reporting pipelines by **reverse-engineering NetSuite** sales and finance workflows, implementing data **validation checks and documenting data transformations** and pipeline workflows to ensure accurate, reliable reporting for Finance and Executive Leadership.
 - Designed 5+ Power BI dashboards for daily sales analytics and executive reporting, replacing manual Excel workflows and reducing **reporting preparation time by 55%**.
-

ORACLE FINANCIAL SERVICES SOFTWARE LTD., Bangalore, India

July 22 – Aug 24

Associate Software Developer

- Developed and enhanced 30+ backend banking services and REST APIs using **Java, Spring Boot, and Oracle SQL**, supporting high-volume financial transaction processing and reducing transaction errors by 20%.
 - Automated deployment and monitoring workflows using **Jenkins, shell scripting, and Tomcat**, improving release efficiency across 40+ enterprise services.
 - Analyzed and resolved production issues across 30+ enterprise banking services using SQL queries, application logs, and debugging tools, improving system stability and operational reliability.
 - **Documented** existing service architectures and development workflows to **support the design and implementation** of new enterprise banking services and improve consistency across development teams.
 - Mentored 4 employees and 3 interns on system architecture, deployment workflows, and troubleshooting practices, accelerating onboarding and knowledge transfer across the team.
-

ACADEMIC PROJECTS

Smart Doctor & Hospital Finder | PostgreSQL, Neo4j, Python

Feb 25 – Mar 25

- Developed a healthcare search platform integrating PostgreSQL and Neo4j to enable provider, hospital, specialty, and insurance plan discovery across 3.2M+ healthcare records.
 - Built scalable ETL pipelines in Python to clean, standardize, and integrate large public healthcare datasets while maintaining relational and graph database consistency.
 - Implemented graph-based recommendation and shortest-path algorithms in Neo4j to support specialty-based provider discovery and healthcare network analysis.
-

Motherese: Prosody-Aware Language Modeling using Whisper | PyTorch, Transformers

Apr 25 – June 25

- Developed a prosody-enhanced variant of OpenAI's Whisper model using PyTorch and Transformer architectures to study syntactic learning in speech.
- Engineered custom embeddings integrating pitch, duration, and suprasegmental speech features, improving dependency parsing F1 scores by 35%.
- Evaluated model performance on CHILDES datasets, achieving up to 66% F1 score improvements on complex long-range dependency tasks.
