SUMMARY

Data Scientist and M.S. Data Science graduate from UC San Diego with 2+ years of software engineering experience and hands-on experience developing forecasting, machine learning, analytics, and data engineering solutions. Skilled in Python, SQL, Snowflake, XGBoost, and cloud-based data platforms, with experience building production forecasting pipelines and large-scale analytics systems.

EDUCATION

University of California, San Diego, CA

M.S. Data Science | GPA: 3.89/4.0 | Graduated: June 2026

SKILLS

- **Languages:** Python, SQL, Java, R
 - **Machine Learning:** Time Series Forecasting, Regression, Classification, Clustering, NLP, Bayesian Modeling, Statistical Inference
 - **Libraries:** Scikit-Learn, XGBoost, PyTorch, TensorFlow, Pandas, NumPy
 - **Data Engineering:** Snowflake, PostgreSQL, Jenkins, SQL Optimization, ETL Pipelines
 - **DevOps & Visualization:** Kubernetes, Docker, Git, Power BI, Tableau
-

WORK EXPERIENCE

MADE BY GATHER, NEW YORK, NY (REMOTE)

Aug 25 – June 26

Data Analyst Intern

- Developed retailer-level sales forecasting models using **Holt-Winters, ARIMA, Random Forest**, and **XGBoost** in Python, improving forecast **accuracy from 47% to 71%** and reducing MAPE by 30%.
- Automated the end-to-end weekly forecasting pipeline using Jenkins, reducing manual reporting effort from 4 hours to 1 hour.
- Designed **Snowflake**-based reporting pipelines by **reverse-engineering NetSuite sales** and finance workflows, improving data accuracy and enabling scalable analytics for Finance and Executive Leadership.
- Designed 5+ Power BI dashboards for daily sales analytics and executive reporting, replacing manual Excel workflows and reducing **reporting preparation time by 55%**.

ORACLE FINANCIAL SERVICES SOFTWARE LTD., Bangalore, India

July 22 – Aug 24

Associate Software Developer

- Developed and enhanced 30+ backend banking services and REST APIs using **Java, Spring Boot, and Oracle SQL**, supporting high-volume financial transaction processing and reducing transaction errors by 20%.
 - Automated deployment and monitoring workflows using **Jenkins, shell scripting, and Tomcat**, improving release efficiency across 40+ enterprise services.
 - Analyzed and resolved production issues across 30+ enterprise banking services using SQL queries, application logs, and debugging tools, improving system stability and operational reliability.
 - Mentored 4 employees and 3 interns on system architecture, deployment workflows, and troubleshooting practices, accelerating onboarding and knowledge transfer across the team.
-

ACADEMIC PROJECTS

Motherese: Prosody-Aware Language Modeling using Whisper | PyTorch, Transformers

Apr 25 – June 25

- Developed a prosody-enhanced variant of OpenAI's Whisper model using PyTorch and Transformer architectures to study syntactic learning in speech.
- Engineered custom embeddings integrating pitch, duration, and suprasegmental speech features, improving dependency parsing F1 scores by 35%.
- Evaluated model performance on CHILDES datasets, achieving up to 66% F1 score improvements on complex long-range dependency tasks.

Smart Doctor & Hospital Finder | PostgreSQL, Neo4j, Python

Feb 25 – Mar 25

- Developed a healthcare search platform integrating PostgreSQL and Neo4j to enable provider, hospital, specialty, and insurance plan discovery across 3.2M+ healthcare records.
- Built scalable ETL pipelines in Python to clean, standardize, and integrate large public healthcare datasets while maintaining relational and graph database consistency.
- Implemented graph-based recommendation and shortest-path algorithms in Neo4j to support specialty-based provider discovery and healthcare network analysis.
